Technology (“science of craft”, from Greek τέχνη, techne, “art, skill, cunning of hand”; and -λογία, -logia[2]) is the combination of techniques, skills, methods, and processes used in the creation of goods or services or in the completion of objectives, such as methodical exploration. Technology can be the acquaintance of techniques, processes, and the like, or it can be entrenched in machines to agree to for operation without detailed knowledge of their workings. Systems (e. g. machines) applying technology by taking an input, changing it according to the system’s use, and then producing an outcome are referred to as technology systems or technological systems.

Computers and the internet are examples of **technology**. The **definition of technology** is science or knowledge put into practical use to solve problems or invent useful tools. The use of the expression “technology” has distorted significantly over the last 200 years. Before the 20th century, the phrase was infrequent in English, and it was used moreover to refer to the portrayal or study of the useful arts.

Today the world is going faster and faster with the use of technology, Most of the work is dependent on the Technology. The future with Machine Learning and Artificial Intelligence must have pros and cons

Pros:-

1. Automated lifestyle and ease of living
2. New ways to treat disease using neural networks and neurosciences
3. Detecting Terrorists
4. Fraud Analysis

Cons:-

1. Less use of Human minds which will make them lazy and Lethargy
2. Number of Unemployment will be more
3. Dependency on Robots and Machines
4. Robots may control Humans
5. Reinforcement learning can create more Robots the Supreme.

Sohail Hussain is a Master of Computer Applications (MCA) from RV College of Engineering, Bangalore, karnatak and keen in working in IT & Online Services.
